Step forward for computer users

ROCC COMPUTERS LTD, of Crawley, have released a new generation world standard multi-user computer system called ROCC GOLD.

ROCC GOLD has been designed as a multipurpose high powered utility computer for every kind of commercial computing usage.

The computer hardware processor technol-

ogy is Motorola 88000 RISC and the software technology is world open standard.

The four models in the ROCC GOLD range provide from 27 MIPS to 120 MIPS enabling GOLD systems to function across the wide performance range from PC fileserver to main-frame.

"The GOLD Standard represents a major

step forward for the computer industry towards a world standard computing utility with as much power as is currently needed, power quadrupling every two or three years, conforming to all the world open software standards for portability of softwares and interworking of systems," said ROCC's chairman Michael Aldrich, "and offering from the beginning most of the world's successful designer softwares."
